Your inside resource for solving unique customer needs

S30 ENGINE AIR INTAKE PRECLEANER

Customer:

Carpenter - a leader in the development, manufacture and distribution of cast/wrought and powder metal stainless steels and specialty alloys used for medical and aerospace industries.

Issue:

Carpenter has many operations that result in a dusty environment where the air is dirty and has the potential to harm the engine over time, resulting in higher maintenance and engine air filter replacement costs.

Custom Solution:

Engine Air Intake Precleaner – Turbo® II that works using centrifugal force and spins dust, dirt, insects, rain and snow from clean air. Only the purified air goes to the air filter.

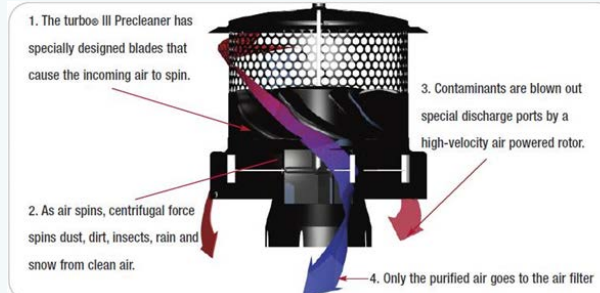

Benefits:

- Extends engine air filter life from 1 to 10 times, reducing maintenance costs
- Reduces engine wear and prolongs engine life
- Maintains effective engine breathing for maximum efficiency and power

Results:

Carpenter requires an engine Precleaner and custom solutions has the answer to meet their specific needs and challenges in a dusty environment.

"The engine precleaner is a great option to provide customers such as Carpenter who want to protect their equipment, and ensure longer life and lower maintenance costs for their engine. Quote the Turbo Precleaner for S30 and other sweepers in dusty applications."

Brian Anderton, Account Manager, AL

Price & Kit Information:
