

SMART-FILL™ AUTOMATIC BATTERY WATERING TANK

FOR SAFETY: Before servicing the machine, park machine on level surface, turn off machine and remove key.

The automatic battery watering system is designed to automatically refill the batteries. **Do not remove battery caps and manually add water to the batteries.**

The automatic battery watering indicator will flash when the battery watering tank is empty and needs refilling.

NOTE: To protect the batteries from damage, the machine's scrub function will be disabled after 10 hours of continued use if tank is not refilled. Add distilled water and restart key to clear the flashing indicator.

- A. Check the water level in the automatic watering tank periodically. Add distilled water when low.
- B. Lift the recovery tank to access the automatic battery watering tank.

- C. Remove the blue cap from the automatic battery watering tank. Using a funnel, fill tank with distilled water.
