

TECHNICAL SERVICE BULLETIN

No. 0107200-001
Machine:7200
System:Electrical

Electrical Schematic Revision

CHANGE DESCRIPTION: Early electrical schematics in the 7200 service manual may have incorrect circuit breaker numbers assigned to them. The latest parts manual (revision 4) has the circuit breakers labeled correctly.

SPECIAL INSTRUCTIONS / PARTS ORDERING : When the 7200 service manual is updated corrections will be made to the schematic. You can make the following changes to your 7200 service manual schematic or insert the attached schematic into your 7200 service manual.

CB-3 should be CB-6

CB-4 should be CB-5

CB-6 should be CB-4

CB-5 should be CB-3

Which Means,

CB-6 should provide voltage for the Yellow wire circuits to the control board.

The 6B/Blu wire feeds CB-5 for the horn circuit.

The 6D/Blu wire feeds CB-4 for the power wand switch.

The 6C/Blu wire feeds CB-3 for the light switch.

WARNING: Always disconnect battery cables from a machine before working on electrical components.
