electrical

“CHECK ENGINE LIGHT” Warning on a 6650D machine.

PRODUCT DESCRIPTION: On a 6650D powered machine the check engine light advises the operator of a high engine temperature condition. Due to the current engine harness wiring the coolant temp switch is tied into the check engine light circuit and not the high engine temp circuit.

PROCEDURE: If a customer is dissatisfied with this function, the electrical engineering department can exchange the instrument panel with a reprogrammed one that will make use of the engine temperature light.

FOR SAFETY: Before leaving or servicing machine, stop on level surface and set parking brake. Then turn off machine and remove key.

WARNING: To warn of hazards or unsafe practices that could result in severe personal injury or death.
