

4 Easy Steps to **Touchless** **Disinfection**

The Tennant ASC-15 gives you a variety of tools and accessories to clean and disinfect hard surfaces in areas like restrooms, stairwells, and locker rooms.

Here's how you can simplify this tough job:

Spray cleaning or disinfection solution on water resistant surfaces like: Concrete, ceramic tile and fixtures, glass, stone tiles, restroom partitions and fixtures.*

Use the brush tool to scrub walls, corners, and hard to reach areas.

After allowing proper dwell time of disinfectant, rinse off the solution using the spray gun.

Vacuum the soil and water from the floor using the squeegee tool. The blower tool can be used to quickly dry fixtures.

**Be sure to reference the cleaning solution instructions and follow the recommendations of the chemical manufacturer for application and protective equipment.*

PRO TIP:

To avoid cross-contamination, be sure to use a machine that has separate motors and hoses for vacuuming dirty water and blowing off clean surfaces.

Contact your Tennant representative today to learn more about touchless cleaning with the ASC-15.
