Industrial facility calls for industrial strength cleaning

Manufacturing industrial minerals can be a dirty, dusty process. A Tennant customer for over 20 years, one Midwestern mineral manufacturer prides itself on the cleanliness of its plant. So when offered the opportunity to test Tennant's new S10 industrial walk-behind sweeper, they were more than happy to participate.

Project Profile

- A 10,000 square foot industrial mineral manufacturing plant in the Midwestern United States.
- The industrial mineral manufacturing process used in the facility creates a lot of dust.
- The plant's resident engineer wanted to improve the cleanliness and cleaning efficiency of his facility with effective sweeping equipment and reliable service and support.

"We still use an older Tennant industrial walk-behind sweeper, the 186, and have been impressed by its performance over the years. So, we expected that the S10 would sweep dust easily and efficiently. And it does. In fact, the machine is so easy to use that our operators were fully trained on the S10 in less than 10 minutes. With 18 operators, that's a time savings that has had a positive effect on our facility's overall productivity."

Efficient sweeping, in even the tightest spaces

According to the facility's resident engineer with two Tennant industrial walk-behind sweepers, the old 186 and new S10, the hardest areas to sweep, edges and congested areas in the 10,000 square foot facility, are now swept clean in just a half hour.

"The S10 sweeps up dust in even the tightest areas within our facility, leaving our hardest-to-clean spaces dust-free in about 30 minutes. Best of all, the areas we sweep with the S10 stay clean for up to eight hours."

Reliable service and support

This manufacturer has been most impressed with the service that Tennant Company has provided them.

"The service is phenomenal. With six machines onsite, they are here regularly, and they usually respond to all service requests within one business day."

Finally, their resident engineer recommends this machine to anyone managing an industrial facility.

"The S10 sweeps and operates much like our old 186 machine, greatly simplifying operator training and use. And our floors look better than ever! Finally, the service that we have received on all of our equipment has been incredibly responsive. I'd definitely recommend this machine to other industrial facilities."
